

Quest Solutions for SQL Server

Ensure Database Quality, Performance and Availability

LiteSpeed™ for SQL Server uses low impact, high performance compression technology to allow companies to reduce storage costs and backup/recovery windows, while maintaining complete control over the backup and recovery process. Its table-level recovery feature allows you to recover individual database objects and encapsulate a complete database restore into a single file to speed up restore times.

Spotlight® on SQL Server Enterprise is an agentless, easy-to-use database issue discovery solution that enables you to identify and resolve performance problems within your SQL Server environment.

SQL Watch™ identifies, tracks and notifies SQL Server administrators of database changes that occur at any given time. It provides reporting and information of who, when and how changes are made in the SQL Server environment.

Toad™ for SQL Server is a database development and administration tool that increases productivity and ensures optimal code quality for your SQL Server environment.

Toad™ Data Modeler helps organizations create, maintain and document their database systems with physical data modeling and reverse engineering capabilities.

Benchmark Factory® for Databases is a performance and code scalability testing tool that simulates users and transactions on the database and replays production workload in non-production environments.

Quest® Capacity Manager for SQL Server solves the problems associated with managing disk space and server resources by providing a complete, detailed portrait of resource consumption and storage requirements with easily interpreted reports, charts and graphs.

Comparison Suite for SQL Server is a set of client-based tools that allow database administrators to compare and synchronize the schema, data and server settings of two environments.

Knowledge Xpert™ for SQL Server provides a comprehensive coding resource that DBAs can use to research, analyze and solve SQL Server 2000 problems instantly.

SQL Turbo™ increases the speed of SQL Server's free text retrieval and enables users to achieve optimum performance for database information retrieval.

Coefficient for SQL Server enables SQL Server professionals to create and report profiles and analysis of their SQL Server databases.

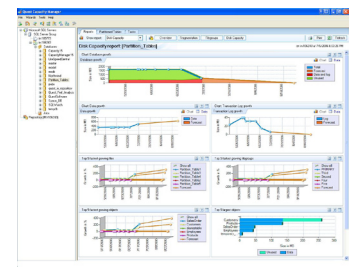

Foglight® Cartridge for SQL Server is a powerful console that monitors every tier in your critical application technology stacks, including databases, networks, application servers, process schedulers and Web servers, alerting you to problems before they impact end users.

Quest Central® for SQL Server is a comprehensive database management solution that enables DBAs to diagnose problems, tune performance and optimize space to deliver greater performance in their SQL Server environment. The Quest Central for SQL Server suite includes:

- Spotlight on SQL Server
- Performance Analysis
- SQL Tuning
- Database Analysis
- Quest Capacity Manager for SQL Server

Spotlight on SQL Server Enterprise's Topology view displays at a glance the health of your complete SQL Server environment.

Quest Capacity Manager for SQL Server provides detailed SQL Server database storage and resource reporting.

Quest's solutions for SQL Server empower IT personnel to deliver, manage and control their database environment.

About Quest Software, Inc.

Quest Software, Inc. delivers innovative products that help organizations get more performance and productivity from their applications, databases and Windows infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 18,000 customers worldwide meet higher expectations for enterprise IT. Quest Software can be found in offices around the globe and at www.quest.com.
